Wong, Seung Kai, 211

Yang, Haitian, 243

SUBJECT INDEX TO VOLUME 35

A Conservative Adaptive-Mesh Algorithm, for Unsteady, Combined-Mode Heat Transfer, Using the Discrete Ordinates Method, 407

A Monte Carlo Method, for the Simulation of, Transient Radiation Heat Transfer: Application to Compound Honeycomb Transparent Insulation, 113

A New Nonlinear Solution Method for Phase-Change Problems, 439

A New Particle-Location Method, Accounting for Source Distribution, and Particle-Field Interpolation, for Hybrid Modeling, of Strongly Coupled Two-Phase Flows, in Arbitrary Coordinates, 41

A Precise Algorithm, in the Time Domain, to Solve the Problem of Heat Transfer, 243

A Robust Mart Algorithm, for Tomographic Applications, 485

Assessment of the Finite-Volume Method, and the Discrete Ordinate Method, for Radiative Heat Transfer, in a Three-Dimensional Rectangular Enclosure, 85

Calculation of Particle Trajectories in Complex Meshes, 431

Comparison of Linear and Nonlinear RNG-Based -ε Models, for Incompressible Turbulent Flows, 1

Comparitive Study, of Conservative and Nonconservative Interpolation Schemes, for the Domain Decomposition Method, on Laminar Incompressible Flows, 65

Comparitive Study, of the Unified Finite Approach Exponential-Type Scheme (UNIFAES), and its Application to Natural Convection, in a Porous Cavity, 347

Discussion of the Finite-Volume Method for Radiation, and its Application Using 3D Unstructured Meshes, 389

DOTS: Pseudo-Time-Stepping Solution of the Discrete Ordinate Equations, 163

Fast and Accurate Numerical Approaches, for Stefan Problems and Crystal Growth, 461

Four-Point Interpolation Schemes, for Convective Fluxes Approximation, 23

General Boundary-Element Method, for Unsteady Nonlinear Heat Transfer Problems, 225

Numerical Procedure, for the Computation of Fluid Flow, with Arbitrary Stress-Strain Relationships, 295

Numerical Solution, of Single-Phase Stefan Problem, Using a Fictitious Material, 211

Parallelization, of the Discrete Transfer Method, 137

Scalar Monte Carlo PDF Computations, of Spray Flames, on Unstructured Grids, with Parallel Computing, 185

Treatment of the Inlet Boundary Conditions, in Natural-Convection Flows, in Open-Ended Channels, 317

Stability Analysis, for Discretized Steady Convective-Diffusion Equation, 369

Velocity-Vorticity Formulation, with Vortex Particle-In-Cell Method, for Incompressible Viscous Flow Simulation, Part I: Formulation and Validation, 251

Velocity-Vorticity Formulation, with Vortex Particle-In-Cell Method, for Incompressible Viscous Flow Simulation, Part II: Application to Vortex/Wall Interactions, 277
